Rationale & Objective:

The physical chemistry lab. practical has been introduced with a view to develop scientific attitude among the students. The topic have been chosen to develop skill among students so that they can measure, differentiate and analyse test results. This will help them in solving the engineering problems in their world of work.

List of Experiments

(At least six experiments should be performed)

- 1 To determine the flash point of the given lubricating oil.
- 2 To determine the viscosity of the given sample, by means of Redwood, Viscometer No. 1 and to establish relationship between temperature and viscosity.
- 3 Determination of smoke point of k-oil.
- 4 Determination of surface tension by capillary rise method.
- 5 Determination of composition of constant boiling mixture of water and HCl.
- 6 Find out the solubilities of Potassium Nitrate at various temperatures and draw the solubility curve.
- 7 Study the change in pH of ammonia solution on the addition of ammonium chloride solution.
- 8 To study the shift in equilibrium between ferric ions and thiocyanate ions by increasing/decreasing the concentration of either ions.
- 9 To determine the heat of neutralization of the reaction between strong acid (HCl) and strong base NaOH.
